

Software engineering insights for everyone in your organization.

Project Health

Identify bottlenecks

View PR cycle time and find opportunities to streamline processes with detailed views of Git and Jira activity.

Target stalled & unplanned work

Leverage project dashboards for clear visibility into stuck tickets or unplanned work that could delay current sprint goals.

Predict future success

Make educated projections of outcomes based on your past and current velocity data.

People Health

Identify team health risks at a glance

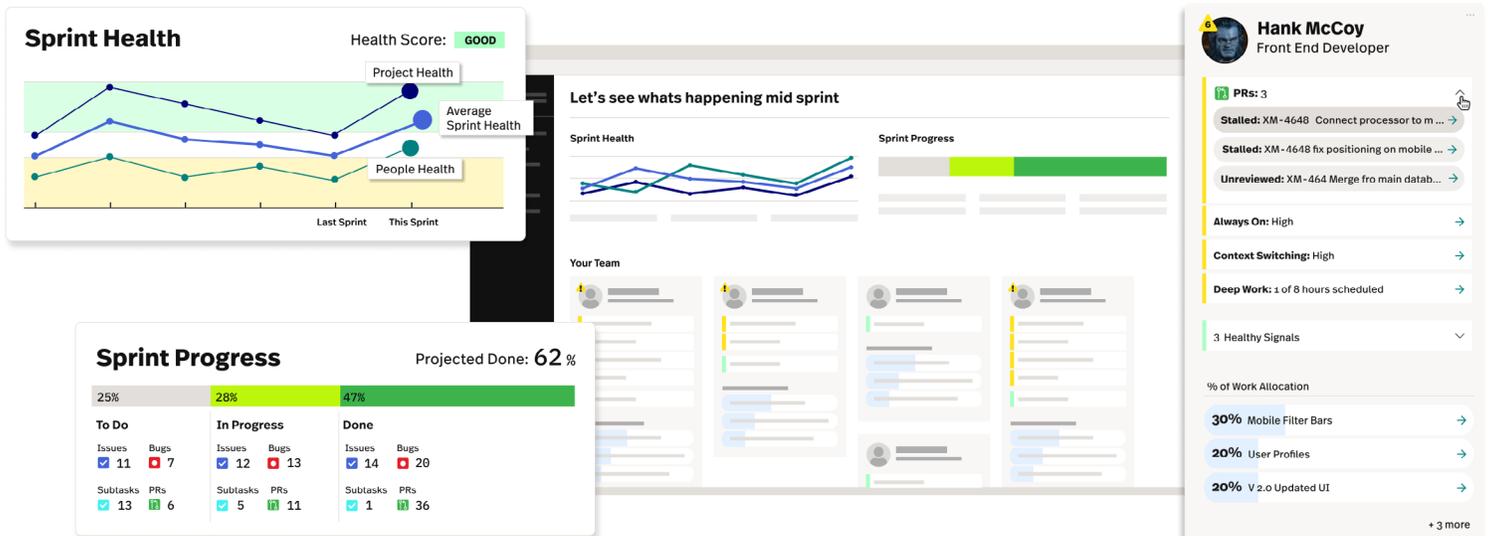

View data covering vital aspects like Deep Work time, context switching, and potential burnout – telling a deeper story of the work being done.

Prevent burnout

Proactively manage burnout risk with alerts to extended periods of longer working hours and heavier output by your team members.

Reduce context switching

See which projects are driving increased context switching and taking up valuable Deep Work time so you can adjust priorities and keep your team focused.

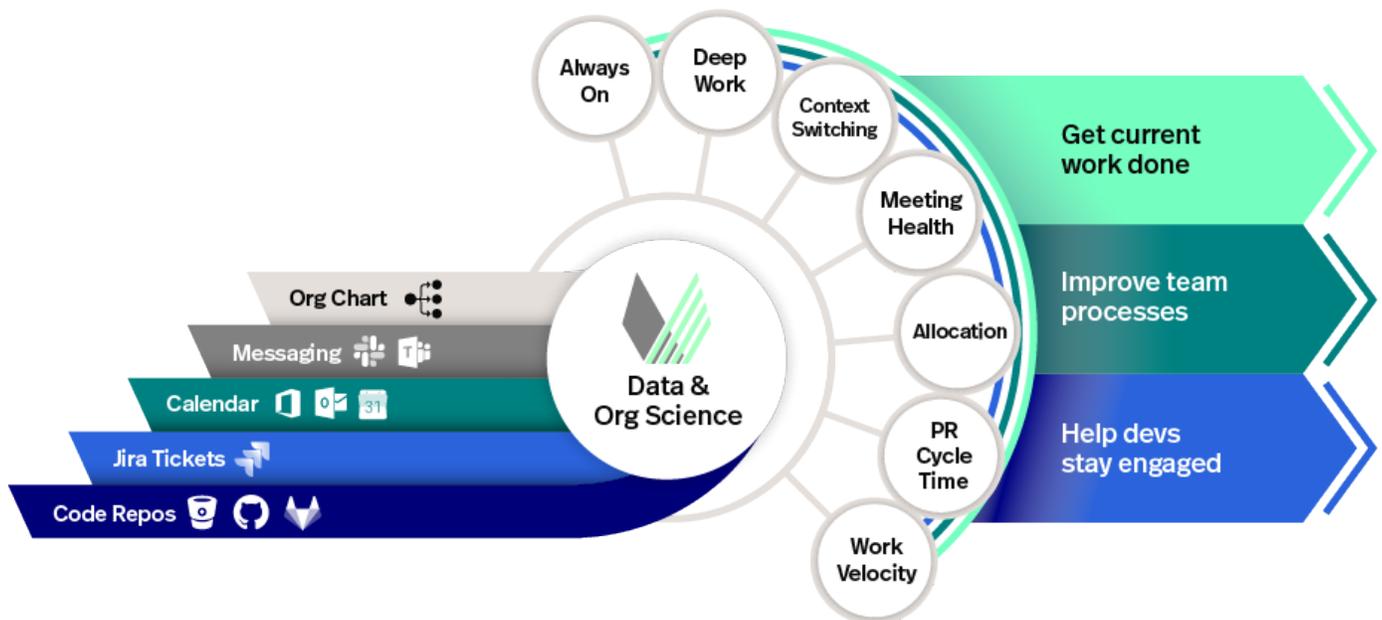

“Uplevel aggregates data from different tools and correlates insightful data that helps me understand the bigger picture. Having information at my fingertips – without having to dig into other tools – has enabled me to have more fruitful conversations that result in more working time and better work-life balance.

I review Uplevel reports every Friday to plan what conversations need to be had with my team. I can't imagine how I could have done these things without Uplevel, especially during the pandemic.”

– **Samrat Kumar** Senior manager of software engineering, Avalara

How it works

How companies use Uplevel

Manage the full sprint lifecycle

A detailed sprint dashboard helps you hit your product release goals. Your daily Sprint Health Score inputs data from your work and your people, empowering you to take informed action when plans change. Improve your sprints over time with powerful Sprint Retro Insights.

Improve employee onboarding and 1:1s

Receive unique, data-filled reports for each team member to serve as reflection points that make your 1:1 meetings more actionable.

Get ahead of burnout

Target burnout at the source. Load balance devs with detailed views of work allocation, context switching, and available Deep Work time.

“The 1:1 reports are REALLY helpful. It's a great round-up. My ICs use them to guide our meetings.”

“I love the People Tiles – I'm quickly seeing important things to ask about, like context switching, burnout, and work allocation.”

Uplevel is your engineering insights solution that leverages data from everyday developer tools. We help you meet your product release goals without burning out your people.
